

Name: Kevin Roi A. Sumaya	Date Performed: December 6 2023
Course/Section: CPE 31S6	Date Submitted: December 6 2023
Instructor:	Semester and SY: 1st Semester
Activity 15: OpenStack Installation (Neutron, Horizon, Cinder)	
1. Objectives	
Create a workflow to install OpenStack using Ansible as your Infrastructure as Code (IaC).	
2. Intended Learning Outcomes	
<ol style="list-style-type: none"> 1. Analyze the advantages and disadvantages of cloud services 2. Evaluate different Cloud deployment and service models 3. Create a workflow to install and configure OpenStack base services using Ansible as documentation and execution. 	
3. Resources	
<p>Oracle VirtualBox (Hypervisor)</p> <p>1x Ubuntu VM or Centos VM</p>	
4. Tasks	
<ol style="list-style-type: none"> 1. Create a new repository for this activity. 2. Create a playbook that converts the steps in the following items in https://docs.openstack.org/install-guide/ <ol style="list-style-type: none"> a. Neutron b. Horizon c. Cinder d. Create different plays in installing per server type (controller, compute etc.) and identify it as a group in the Inventory file. e. Add, commit and push it to your GitHub repo. 	
5. Output (screenshots and explanations)	
Step 1: First we create a repository	
	

Step 2: Clone the created repository

```
sumaya@Workstation:~/Hoa15$
```

“Already cloned just forgot to screenshot the procedure”

Step 3: Creating a file inside the directory (ansible.cfg).

```
sumaya@Workstation: ~/Hoa15
File Edit View Search Terminal Help
GNU nano 2.9.3 ansible.cfg
[defaults]
inventory = inventory
host_key_checking = False
deprecation_warnings = False
remote_user = kevin
private_key_file = ~/.ssh
```

Step 4: Put the ip address into the inventory file.

```
GNU nano 2.9.3 inventory
[horizon]
192.168.56.105

[neutron]
192.168.56.105

[cinder]
192.168.56.105
```

Step 5: Necessary file for ansible.cfg

Hoa15 / ansible.cfg

Sumaya and Sumaya Updated Repository

Code Blame 9 lines (6 loc) · 136 Bytes Code 55% faster with GitHub Copilot

```
1 [defaults]
2
3 inventory = inventory
4 host_key_checking = False
5
6 deprecation_warnings = False
7
8 remote_use = kevin
9 private_key_file = ~/.ssh
```

Step 6: Creating a playbook playbook that converts the steps in the following items

Hoa15 / roles /

Sumaya and Sumaya Updated Repository

                         └─5147 (wsgi:horizon) -k start
                           └─5148 (wsgi:horizon) -k start
                             └─5149 /usr/sbin/apache2 -k start
                               └─5156 /usr/sbin/apache2 -k start

[3]+  Stopped                  systemctl status apache2
```

Step 11: Github Commit / Link

<https://github.com/KevinS4160/Hoa15.git>

Reflections:

Answer the following:

1. Describe Neutron, Horizon and Cinder services

- Neutron focuses on networking, Horizon provides a web-based dashboard for managing OpenStack resources, and Cinder deals with block storage to meet the storage needs of virtual machines in an OpenStack environment. Together, these services contribute to the comprehensive infrastructure management capabilities of the OpenStack platform.

Conclusions:

- I learned a lot about Horizon, Cinder, and Neutron while developing this. Neutron, Horizon, and Cinder are all essential components of the OpenStack cloud computing platform, constituting a powerful and comprehensive infrastructure management system. Neutron simplifies network connectivity and services by enabling the development and management of virtual networks. Horizon is the user-friendly web-based dashboard that allows users and administrators to effortlessly interact with OpenStack services.
